

How to Fold a Paper Airplane

Group XXDF

November 13, 2017

Introduction:

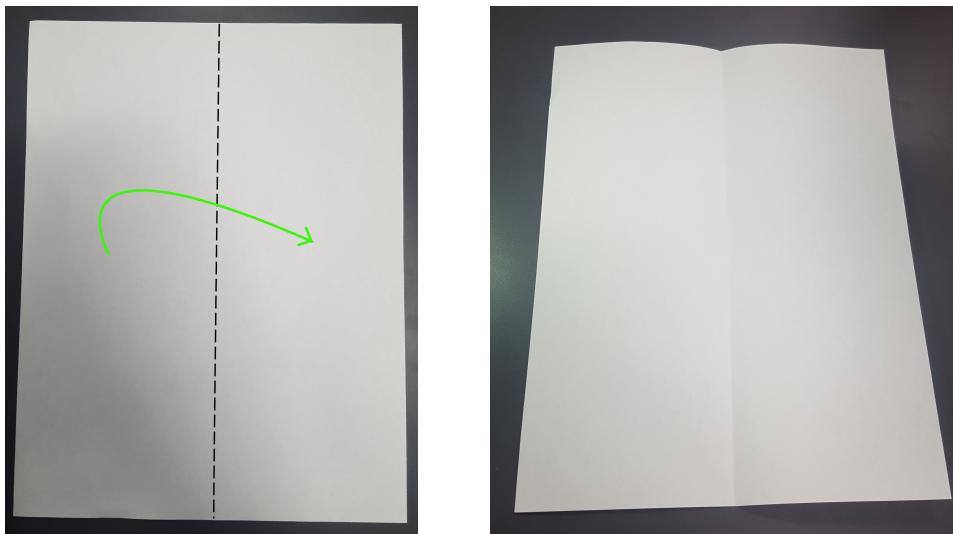

Have you ever wanted to send super secret messages across the classroom or lecture hall that no one else was allowed to read? Well, with our patented stealth paper plane design you can¹! Watch as your stealth plane soars across the skies of your lecture hall.

Materials:

One sheet of $8\frac{1}{2}'' \times 11''$ paper
Colored pencils (optional)

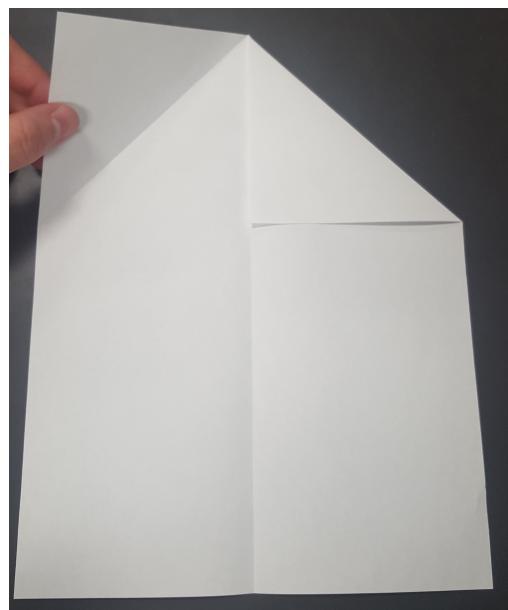

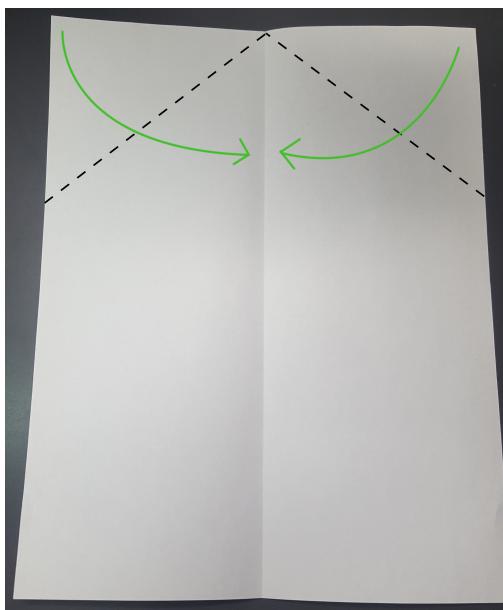

Instructions:

Step 1: Fold the paper in half vertically (hotdog style).

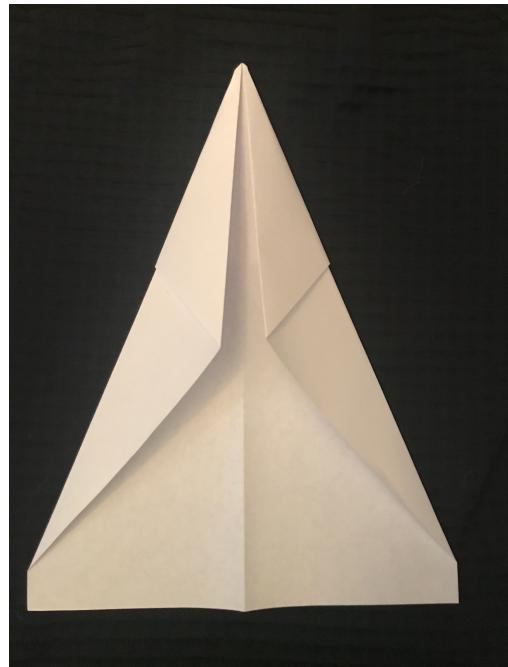

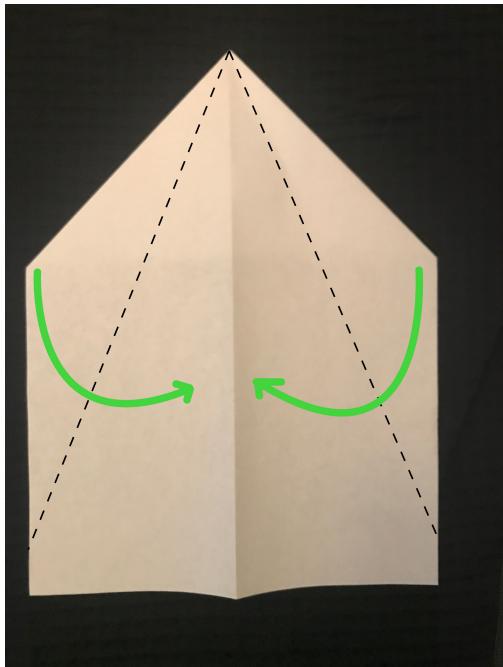

¹Paper airplane is in no way stealthy and will not actually hide your secret messages. If you throw this plane in a lecture hall or classroom your instructor will see it, and will confiscate it. No patent exists for paper airplane design.

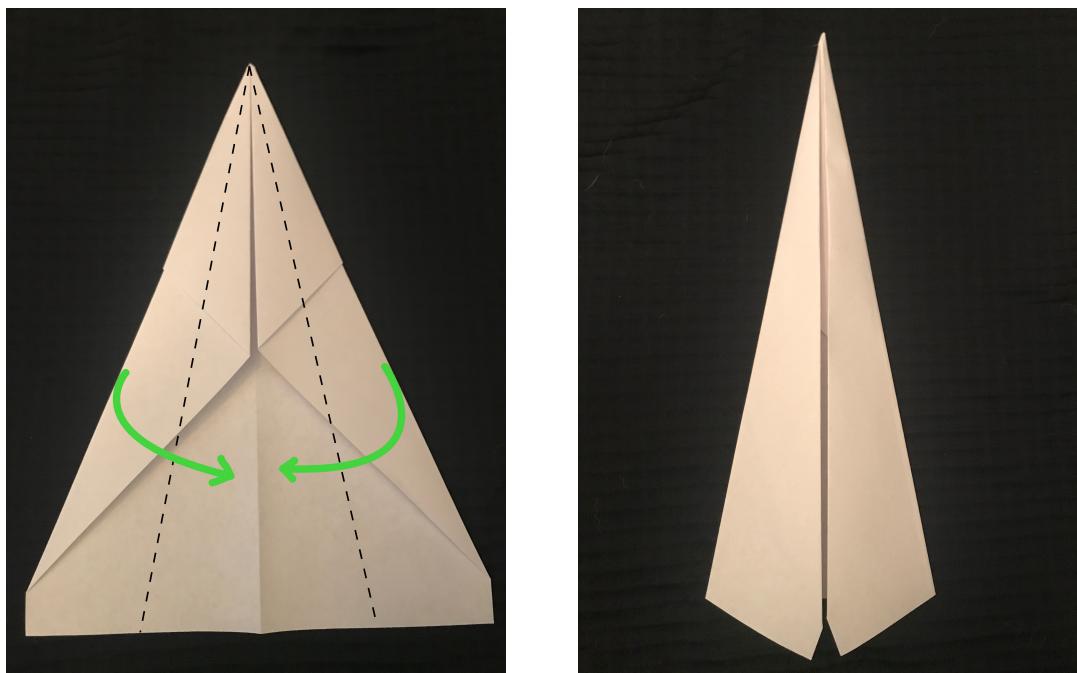

Step 2: Fold each top corner into the center fold.

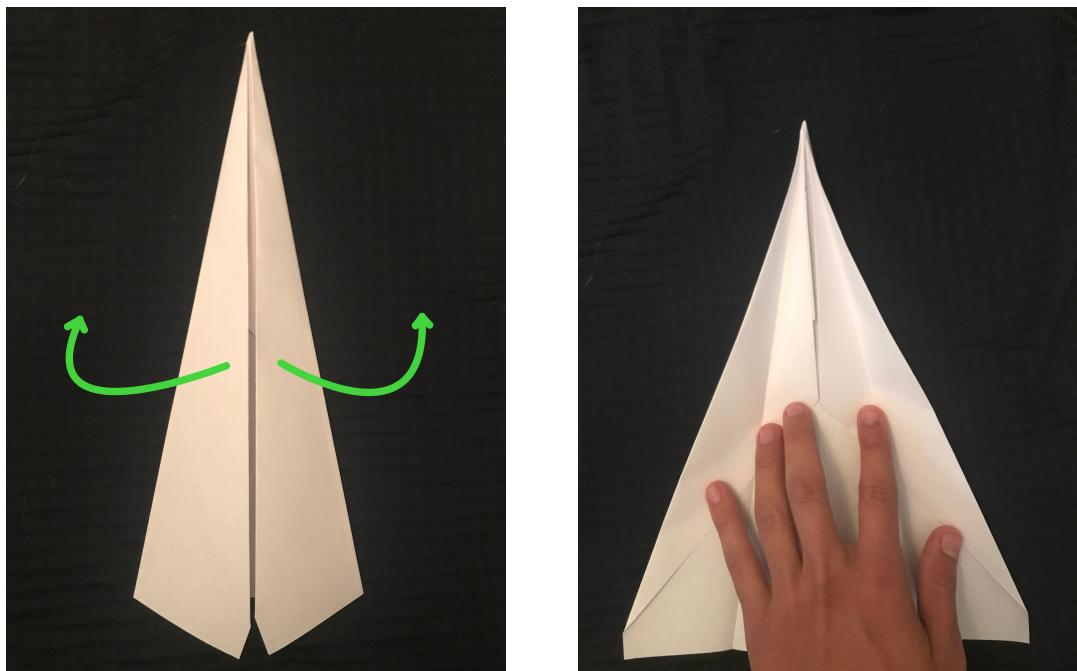

Step 3: Flip the paper over and fold the corners in so they meet on the center crease.

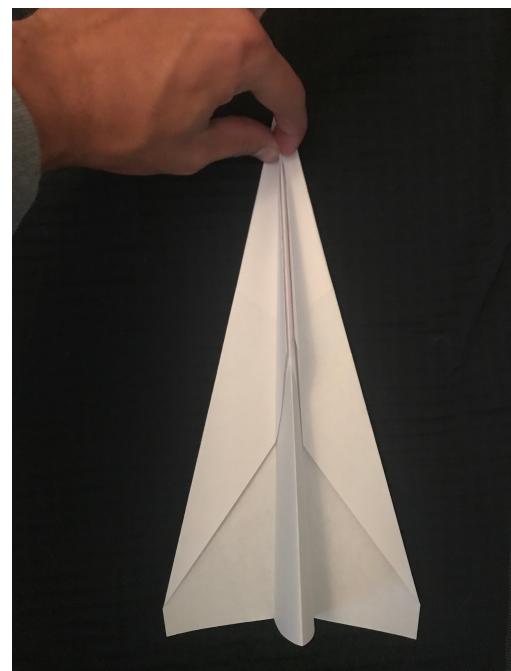

Step 4: Fold the outside edges into the center so they line up along the center fold.

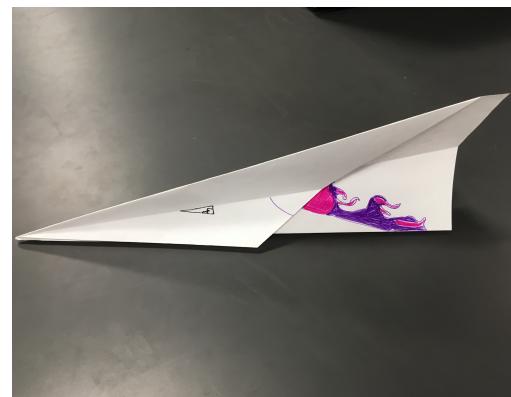

Step 5: Now unfold the last fold.

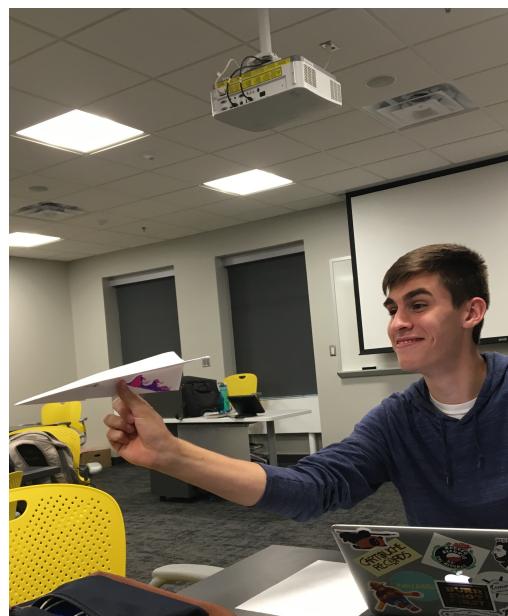

Step 6: Pinch the center two sections together.

Step 7: You now have a paper airplane. optionally you can draw flames on it to increase its speed.

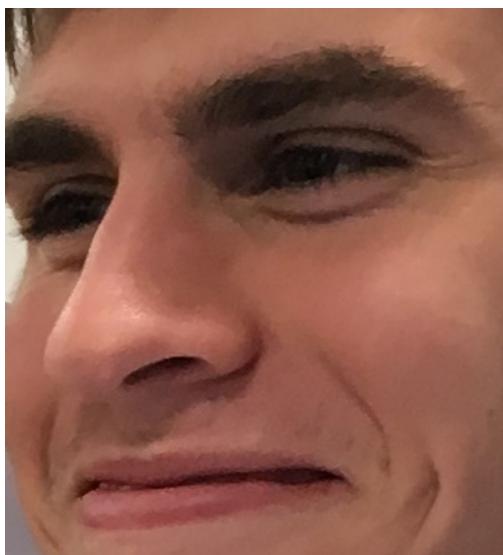

Step 8: Throw gently release when the plane is level with the ground.

Conclusion:

You have now successfully created your a paper airplane, If it did not turn out how you planned grab a new sheet and try again or add more flames. Have fun with your plane and be sure not to aim at any one's head ², unless you are having a war. In that case stock up on planes and build a fort.

²Do not throw paper airplanes at other people, you will shoot your eye out.
